

How to Use Your Holiday Picture Frame

There are 2 ways you can use this free holiday picture frame.

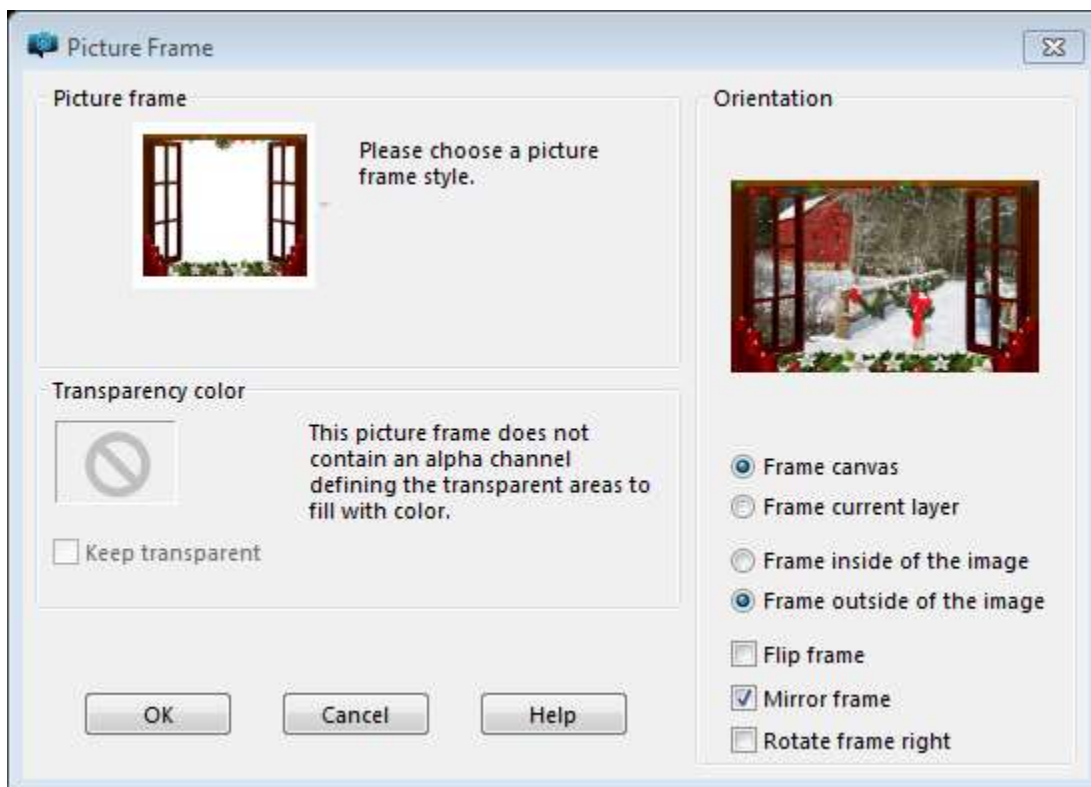

1. Using Frames with PaintShop Pro

If you are a PaintShop Pro user you will want to use the file [WinterWindowIndoors.pspFrame](#). Open the .zip file you downloaded and extract the PSP frame file to the following location:

C:\Users\YOURNAME\Documents\Corel PaintShop Pro\18.0\Picture Frames

Note: If you are using an earlier version of PaintShop Pro, the file path will have your version number instead of **18.0**.

Once you save your picture frame file to this location, it will display in the gallery in the Picture Frame dialog box. If you want to make sure that the frame is in the correct location, go to **Image > Picture Frames** and click on the drop-down list in the top left corner and your frame should be in the gallery. Now you're all set to use your new PaintShop Pro picture frame. Use the options on the right to place the frame inside or outside your image, flip or rotate to get the look you want.

2. Using Transparent PNG Files

The .zip file you downloaded contains the holiday picture frame as a transparent PNG, in horizontal and vertical format. Simply save these files to your computer, open with your favorite photo editing or graphic design software and paste your photo into the frame.
